

PRODUCT INFO

Fortress Climb-Guard

An aluminium curved barrier system which prevents unauthorised access to low roof, walled and fenced areas.

FEATURES

- A robustly engineered but simply detailed security product
- Equally suited to retrofit or new build
- Fits directly onto the building fascia and roof spars
- Provides maximum security in high risk areas
- If required, existing guttering can be replaced at the same time with our recommended deep flow system
- Finished to BBA approved polyester powder coatings

Designed for mental health

Britplas' aluminium Fortress Climb-Guard solution is ideal for mental health environments where low roofs or other climbable features may present a danger to patient safety.

Comprising of specially engineered support brackets and pre-formed curved barrier sections, it is suitable for all roof pitches and low wall areas and can be fitted over virtually any gutter profile, or can include an integrated guttering system.

The curved profiles are non-threatening and non-obtrusive in appearance and can be powder coated in any RAL colour.

Britplas offers an end-to-end solution, from detailed site survey and in-house design right through to fitting via our specially trained installation teams.
