

PRODUCT INFO

Safevent® Window

The original and award winning anti-ligature operable window. Designed to optimise security, safety and ventilation.

FEATURES

- Anti-ligature frame, mesh, handle and hardware
- Multitask handle encompasses winder, patient thumb lock and staff lock
- Vertical or horizontal sliding sash
- Manual or electric sliding sash
- Ultra slim aluminium profile to maximise light and reduce sightlines
- Low maintenance and easy cleaning via Access frame system
- Concealed drainage
- Optional 3 multi point anti-ligature locking openings

Operable. Secure. Simple.

The Safevent® is a horizontal or vertical sliding window system comprising a double fronted window and a free sliding external sash.

The double window has one glazed area and the other is fitted with a stainless steel mesh. The sliding sash is glazed, sealing the mesh side when closed and is weather tight and draughtproof.

In this way, the window provides natural light and ventilation which can be controlled by service users, yet it also maintains a safe, secure and anti-ligature environment to meet the requirements of low and medium secure facilities.

Britplas offers an end-to-end solution, from in-house design right through to fitting and post project maintenance options which are carried out by our own installation teams.
